To whom it may concern

Declaration on the Non-Use of Per- and Polyfluoroalkyl Substances (PFAS)

PFAS, or raw materials intentionally containing PFAS, are not used or intentionally added in the manufacturing processes at Pyroll's Tampere site. The packaging complies with the applicable PFAS-related requirements set out in Article 5 of Regulation (EU) 2025/40 on packaging and packaging waste (PPWR).

This statement is based on supplier Declarations of Compliance and relevant statements, together with Pyroll's internal process control. Representative Total Fluorine (TF) screening by an external ISO/IEC 17025-accredited laboratory has been performed on packaging samples processed through Pyroll's production process as supplementary verification to support the verification that the converting and printing processes do not introduce PFAS-related fluorine residues above the applicable regulatory criterion.

The Total Fluorine (TF) screening results were below 50 mg/kg (ppm).

Based on the information available to Pyroll at the date of issue, the packaging materials supplied by Pyroll conform with Regulation (EU) 2025/40 to the extent applicable on the date they are placed on the market. The recipient is responsible for verifying the suitability of the packaging for the intended packed product and conditions of use.
